Game-asset inventories

Game-asset inventories

This part contains 5 notes, from `archive/ember-avelan-experimental.md` through `archive/game-assets-worlds-2026-11-01.md`.

Inventory notes under `archive/`.

`archive/ember-avelan-experimental.md`

Archival notes: Ember / Avelan experimental work

Status: Decommissioned 2026-10-28. These notes preserve prior attempts to understand and walk the Graal environment outside the main analysis corpus. Raw assets and full source trees are archived separately.

Drive archive

A complete zip of the experimental project is stored on Google Drive:

- Path: `/[Grok/[Projects/Graal Enigma Playerworld.zip`
- File ID: `1Zqyp3ECN8dP-dk6jBjqfRQ728_PZzbgY`
- Link: (Drive link omitted from the document release)

The zip contains Ember series sources, the Avelan 10×10 world, tileset variants, the tiledef plugin, stitched overworld maps, and documentation written against those trees.

What the experiments were

Ember series (React top-down walker)

A minimal client that loads GLEVNW01 `.nw` and GR-V1 `.graal` boards, walks them, and follows doors. No NPC scripts, no combat, no socket.

- Ember / Ember2 / Ember3.1: progressive addition of the pics1 type-0 mask, tileset upload, and a fly toggle that ignores the mask.
- Start level for the later builds: `avg-05.nw` at 10.5, 56.5.
- Save key used by Ember3.1: `ember31-avelan-v1`.
- Docs written against Ember3.1 live in the archive under `Ember3.3/Documentation` (the request was for 3.3; no 3.3 source tree existed).

Key level-format observations confirmed or refined here (already present in the main corpus):

- Boards are 64×64.
- Text `.nw` uses the `A-Za-z0-9+/` alphabet; pair = `hi * 64 + lo`.
- Edge links use `-1` on the free axis.
- Door arrival for the house south door to `egk-10` is resolved by looking back rather than trusting `nx, ny`.

Avelan (original 10×10 overworld)

100 GLEVNW01 levels named `av{a–j}-{01–10}.nw`. Landmarks:

- Halebridge — `avg-05` (start)
- Saltwharf — `avf-09`
- Westmere — `avd-06`
- Highcairn — `avf-03`
- Cinderholm — `avi-08`
- Greywater — `avg-06`

Useful as a clean, self-contained test world for offline walkers and future level-editor fixtures.

Tilesets and the blocking mask

All sheets are 2048×512, 16×16, 128×32 = 4096 cells. Index = `y * 128 + x`.

- `eg_tiles.png` — original Enigma pics1.
- Identity remake and Koyo Isles themed variants.
- Emberhold series (`em_tiles` through `em_tiles4.png`): art that follows the type-0 mask (walls on 22, grates on 20, water 11, lava 12, chairs 3, beds 4/5).

Blocking is not in the pixels. The mask is a 4096-byte `types.bin`:

- Body cannot enter type 20 (throw-through) or 22 (blocking).
- A throw cannot enter 22; it can enter 20.
- Other types (0, water 11, lava 12, chairs 3, beds 4/5, …) are enterable.
- Feet cell is `floor(px / 16)`, `floor(py / 16)`.

The tiledef plugin (SKILL.md + assets + `tiletype.py`) is included in the archive. Do not treat the client line `pics1.png,,0` as the mask.

Enigma overworld

25×25 grid (`eg{a-y}-{01-25}`, 625 levels). Player start house is `onlinestartlocal.graal`, which doors onto `egk-10.graal`. Stitched maps (original and remake tileset) and the level-name grid are in the zip. The full life-size 25600×25600 stitch is also present as row strips.

Relation to this repository

These experiments were exploratory walkers and art passes. They do not add new protocol facts or decompile material. The format notes they produced have already been folded into the main corpus (levels, tile types, door resolution). The archive exists so later work (especially Seihai level-editor expansion) can pull clean test levels, a known-good mask, and the tileset variants without reconstructing them.

Suggested use for Seihai

- Drop `avg-05.nw` (and the rest of Avelan) into an assets folder for offline editor and walker tests.
- Use `types.bin` as a fixture when validating tiledef / arrays.dat loaders.
- The Emberhold tilesets are drop-in 2048×512 sheets that already respect the mask.

No further maintenance is planned for the Ember trees themselves.

`archive/game-assets-2026-11-01.md`

Game Assets folder (2026-11-01)

Inventory of the owner's Game Assets folder, on Google Drive under `/[Grok/Graal/Game Assets`, created 2026-11-01. Nothing from the folder is committed here: no zips, images, sounds, levels, or website copies.

Evidence is a static read of Drive listings, plus headers from a few small archives. Multi-megabyte world trees and the multi-hundred-megabyte packs were not downloaded. No binary was run. Official host names that appear inside a couple of old pages are left out of this note.

The folder has three children:

Child	What it is
Game Assets	`Graphics/` and `Sounds/`
Playerworlds	35 folders: 33 named worlds, plus archived servers and level dumps
Websites	15 website archives and a folder of 12 screenshots

Sounds

`Sounds/` is three archives, not loose files.

Archive	Size	Opened
`SFX.rar`	1.2 MB	yes
`MIDI [Graal New World].rar`	17 KB	header only
`MIDI.rar`	227 MB	no

`SFX.rar` (files dated 2001–2003) lists 126 `.wav`, 2 `.mid`, and 1 `.au`, under an `SFX/` directory. Uncompressed wav sizes run from 794 bytes to 63 KB (median about 13 KB): 16 under 5 KB, 64 from 5 to 20 KB, 35 from 20 to 50 KB, 11 at 50 KB or more. Names are short action words (`axe.wav`, `bomb.wav`, `chest.wav`, `closedoor.wav`) plus numbered instrument takes (`flute1`–`flute8`, `guitar1`–`guitar8`, `drums1`–`drums4`).

Opened samples: `axe.wav` is a 1,506-byte RIFF WAVE file; `sandbox.mid` starts with the standard MIDI header; `kookabur.au` starts with the Sun audio header (26 KB).

The 17 KB New World MIDI archive is a RAR. Its header names `MIDI [NW]\Other\dc.filelocations.ini`. The rest of that archive was not listed. The 227 MB `MIDI.rar` was not opened.

Graphics

`Graphics/` is 27 archives (24 RAR, 3 are 7z or a second RAR part). Names follow the usual client folders: `backpals`, `Baddies`, `body`, `bomb1`, `bomb2`, `Bomy`, `Fonts`, `Gani`, `GUI`, `hats`, `heads`, `horses`, `letters`, `pets`, `shields`, `sprites`, `state`, `swords`, `Tiles`, `Wings`, plus loading screens, emotion images, computer backgrounds, and templates. Sizes run from `pets.rar` at 2 KB up to `heads.7z` at 210 MB and `Graal File Pack.7z` at 118 MB. Those two, and `Graal File Pack.part2.rar` (25 MB), were not opened.

Opened or header-checked:

Archive	What was checked
`Gani.rar` (1.5 MB)	full listing
`Tiles.rar` (572 KB)	full listing, two PNGs measured
`SFX.rar`	see Sounds
`pets.rar` (2 KB)	RAR header names one PNG
`backpals.rar` (16 KB)	RAR header names PNG palettes

`Gani.rar` is one flat `Gani/` directory, 2,646 files, about 16 MB uncompressed: 2,464 `.gani`, 123 `.png`, 54 `.gif`, 2 `.mng`, 2 `.zip`, and one file with no extension. Gani sizes run from 20 bytes to 55 KB (median about 7 KB). Names are lowercase effect and pose stems (`arrow.gani`, `akuma-effect-charme.gani`, `amsel_sten-walk.gani`), often `world_or_author` plus `idle` / `walk` / `fire`.

Two text shapes showed up. The smallest files that were opened (`era_parksign.gani` and five siblings, all under 200 bytes) start with `GANI0001`, then `SPRITE`, `SINGLEDIRECTION` or `DEFAULTHEAD` / `DEFAULTBODY`, then `ANI` / `ANIEND`. A mid-size sample was mixed: some of those also start with `GANI0001`, and others (`arrow.gani`, `axe2.gani`) start at `SPRITE` with no version line. This note does not claim a ratio for all 2,464 files.

`Tiles.rar` holds five images: `pics1.png` (162 KB), `pics1format.png`, `1IMp0kk.png`, `angel_tile-template.png`, and `pics1d_legion.gif` (231 KB). The two PNGs that were measured are both 512 pixels tall and wider than they are a square tile sheet: `pics1.png` is 1856×512, `angel_tile-template.png` is 1952×512. That `pics1.png` is not the 2048×512 client sheet described in `client-internals/client-assets.md`.

`pets.rar` names `pets\22 - BTsddue.png`. `backpals.rar` names `backpals\afirebackpal.png` and `backpals\dusk1.png`. The same palette names also sit inside the level dump below, as PNGs of about 1–10 KB. The other graphics archives were not opened; their formats are only the archive names.

Levels

Loose level files are not at the top of Playerworlds. They sit inside RAR dumps.

`# Level Dumps #` has two folders. "Graal - Level Dumps" is 20 small RARs (hundreds of bytes up to `alkarenhyralt_levels.rar` at 669 KB), named for a place or a date (`9-06-2000.rar`, `elftown.rar`, `partyhall.rar`). "Graal New World - Level Dumps" is 17 RARs (`3dcube.rar` at 1 KB through `Agret Levels and scripts.rar` at 2 MB). Only `alkarenhyralt_levels.rar` was unpacked.

That dump is 82 files: 34 `.nw`, 16 `.graal`, 20 `.png`, 7 `.gif`, plus one each of `.txt`, `.zip`, `.ini`, `.bmp`, and `.log`. Of the level files that extracted:

Magic	Where
`GLEVNW01`	29 `.nw` files
`GR-V1.03`	16 `.graal` files
`GR-V1.03`	5 `.nw` files (the extension is not the magic)

An opened `GLEVNW01` file (`ak_aa-01.nw`, and a police `.nw` in the same dump) is text: the magic, then 64 `BOARD` rows, then `LINK`, `SIGN`, and `NPC` / `NPCEND` blocks. The police file has 4 links, 1 sign, and 6 NPC blocks. `formats/grv1-decoder` read `asas.graal` as `GR-V1.03` with no links, baddies, NPCs, chests, or signs, and `andormine.graal` (from the Andor archive below) as `GR-V1.03` with 2 links and 40 NPCs. No `Z3-V1` magic turned up in the files that were opened. Sign text and NPC scripts were not copied.

Playerworlds

The 33 named world folders, and the ones opened under archived servers, are dated RAR (sometimes 7z or zip) packs, not loose trees. Examples that were listed but not unpacked: Enigma (five RARs, 2002–2005, one of them "levelsonly"), Doomsday (five RARs, 2001–2003, up to 28 MB), Era (eight archives, including a 90 MB and a 164 MB levels-and-images pack), Classic (eleven RARs, 2000–2009, plus a 524 KB iPhone-overworld RAR), Zelda Online (three RARs: `Zelda Online.rar` 49 KB, `Zelda.rar` 948 KB, `zolevels.rar` 49 KB), Unix Graal (one 15 MB RAR). `# Archived Servers #` is 87 folders in one listing (no further page), from an offline-games folder through Zerati. The one archived folder that was opened (Chaos Continuum) is a single RAR. The offline-games folder is 14 RARs, one of them 265 MB. Those large packs were not downloaded.

What a pack actually contains depends on which archive it is. Three were listed all the way through:

Andor, 21 July 2002 (`Andor [2002-07-21].rar`, 1.6 MB, 532 files). One flat `Andor/` directory holds 409 `.graal` and 93 `.nw` (502 levels), plus `bocotest.gmap`, one `.gani` is outside that directory, three `.mng`, one `.mid` (46 KB), one `.wav`, and PNGs. There is no separate NPC or weapons tree; a level named `andor_npcarea.graal` is still a level file. Screenshots and a `Takino/` set of ghost PNGs sit beside the world. `bocotest.gmap` is text `GRMAP001`, `WIDTH 3`, `HEIGHT 3`, `GENERATED` pointing at an `.nw` name, then the usual generator keys (`GENSEED`, `GENBASE`, `GENEVENBORDERS`, `GENHEIGHT`, `GENCHAOS`, `LEVHEIGHT`, `LEVCHAOS`, `MAPIMG`) and `HEIGHTMAP` / `RANDOMSEEDS` blocks. `andormine.graal` is `GR-V1.03`. `ak_aa-01.nw` is `GLEVNW01` with 64 `BOARD` rows and one NPC block.

Era without levels (`Era_No_Levels_5_19_2019.rar`, 108 KB, 42 files). Three script folders, all `.txt`: `weapons/` (command, options, and event scripts), `NPCS/` (control, staff, shop, SQL), and `classes/` (`func_*.txt`). No levels, gmaps, or ganis in this particular archive. A separate Era backup on Drive is 90 MB and was not opened, so this file is not the whole world.

Graal 2002 client zip (`graal2002v22.zip`, 960 KB, dated December 2001). Nine `GRMAP001` files under `levels/maps/` (`main` 40×40, `caverns` 16×16, `mines` 2×2, and six others), plus `loadgmaps.txt` naming those nine, plus `Graal_2002v22.exe` (1.7 MB). The executable was not run. This zip has maps, not the level bodies.

Other shapes seen only as listings: Zone is `sounds.rar`, an assets RAR, an iPhone RAR, and a `Zone Files` folder of two image RARs, `zone_ganis.rar` (298 KB), `Zone_GMAP.rar` (2 KB), and `zone_gui.rar`. The gmap RAR's header names `zone_ad.gmap` and `zone_platform.gmap`; it was not extracted. Graal2001 is several multi-megabyte level archives plus a 9 KB `graal2001classes.zip` and two loose text files (a 427-line GS1 bomy script and a one-page 2001 letter; neither is copied). Its New World subfolder also has `music1.mid` (6 KB, not opened), `npccontrol.txt`, `npcserverdoc.txt`, `RemoteControl-NW.exe` (not run), and one JPEG. The NPC-server note describes a program that logs into the 2001 game server like a player, loads levels and NPCs, and runs scripts on a tenth-of-a-second loop, with a `//#CLIENTSIDE` split for drawing and music. The NPC-control note is five lines about who may connect; the host it names is omitted here.

Old websites

`Websites/` is 15 RARs plus `Websites Screenshots/` (12 PNGs, 65 KB to 2.4 MB). The screenshots were not opened. From the filenames they are captures of Armageddon (2010), Coasta De Agua (2000), Elven Lands (2001), a 2001 intro page and main page, a 2019 Adventure page, a 2010 Reborn page, two topsite listings, a fansite before it changed hands, a holiday news page, and a ministry-themed page.

Archives that were opened:

Doomsday, October 2001 (98 KB, 13 files). Four HTML pages, all titled "Welcome to Doomsday Online", plus a start-message RTF with the same title, event and map images, and a map zip. The pages are a mini-site: an index that says a newer Doomsday is in progress, a download page that tells the reader to unzip a map into the maps folder, a short events list, and a numbered rules list. The start message says this mini-site stands in for a plain start message.

Game Boy demo site, snapshot dated 22 September 1999 (110 KB, 28 files). Titles that were read: "Graal Gameboy", "Graal Gameboy - Downloads", "Graal Gameboy - Email List", "Graal Gameboy - News", "Graal Gameboy - Screen Shots", "Graal Gameboy - Production Team", and a tiny "Sorry" page. Images are a logo, a cartridge picture, and numbered screenshots. The pages document the demo: news, downloads, how to order, the team, and pictures.

Community site, 5 January 1999 (57 KB). The front page is titled "Graal-Online". Other real pages are "Graal-Online: BBS", "Graal-Online: Chat", and "Galen's Weak Apology". Many companion files are Internet Archive shells titled "Internet Archive Wayback Machine", or a 404 page, so this rar is a saved mirror of the front page plus BBS and chat, not a full site copy. One chat page contains an address; it is not repeated here.

November 2001 site source (634 KB, 105 files: 45 `.php`, 28 `.inc`, 22 `.htm`, plus shtml/html). Opened pages have no useful `<title>` (the header file's title is the PHP variable for the site name). From the file names the tree is accounts (signup, age check, conduct, license), a guild control panel, a shop, a download page, and admin. `index.php` is a story list. One account page names an official host; that host is not written here. A 5 MB file saved as `.htm` is a classic remote-control log and was not read. Files whose names are an IP ban list and an fstab note were not opened.

~~Header-only, not extracted: a 20 KB Chaos Continuum site from November 1999 names `index1.html` and `download_gif.html`; a 24 KB ODiUM v4 site from March 2002 names `index.html.html` (the extension is doubled in the archive).~~

~~Not opened, filename and size only: a classic-community flash intro (30 KB), that community's forums dump (52 MB), a Dragon world site-and-server archive (18 MB, 2014–2017), a guild vault site (177 KB, 2004), a 2023 construction site (5.7 MB), a kingdoms library site (4.8 MB, 1998–2006), an NPC website (59 MB, 2003), a forum SQL dump (225 KB, 2006), and a 2019 developer-site archive (3.1 MB).~~

Those eleven are read in `archive/game-assets-websites-2026-11-01.md`. The Game Boy site above was already opened in this inventory.

Verified against filenames only

Checked by opening bytes or a full archive listing: `SFX.rar`, `Gani.rar`, `Tiles.rar` (two PNG sizes), the alkaren level dump, the Andor 2002 RAR (including one gmap and two level headers), the Era script-only RAR, the 2002 gmap zip, the Doomsday, Game Boy, 1999 community, and November 2001 website archives (titles and file names, not full page text), plus `npcserverdoc.txt` and `npccontrol.txt`.

Checked only as a RAR header name: `pets.rar`, `backpals.rar`, the small New World MIDI rar, `Zone_GMAP.rar`.

Seen as Drive names and sizes only: the other graphics packs (including `heads.7z` and both file-pack parts), `MIDI.rar`, the large world and archived-server RARs, the Zelda Online RARs, the level-dump RARs other than alkaren, and the 12 website screenshots. The website RARs that this note left unread are summarized in `game-assets-websites-2026-11-01.md`.

archive/game-assets-graphics-sound-2026-11-01.md

Graphics and sound packs (2026-11-01)

The Game Assets inventory (archive/game-assets-2026-11-01.md) lists the archives under /[Grok/Graal/Game Assets and leaves the large graphics and sound packs, plus three small RARs, as filenames. This note opens those. Nothing from them is committed: no archives, images, or audio.

Evidence is a full file list of each archive, plus header samples (image width and height, MIDI text events, a few ID3 tags). No program in the archives was run. Official host names that show up inside a few filenames are left out.

heads.7z

Graphics/heads.7z is a solid 7-zip archive, 219,893,893 bytes, one LZMA block. Uncompressed it is 273,472,670 bytes: 34,369 files and 2 folders. Image timestamps run from 1997 to 2014. The heavy years are 2003 (6,327 files), 2004 (5,549), 2014 (5,473), and 2005 (4,575).

Where	Files	What
heads/heads/	34,366	the loose images, plus one .htm and one .pe4
heads/heads.rar	1	RAR5, 115,588,316 bytes
heads/prewipeheads.zip	1	zip, 13,150,942 bytes
heads/teikaro-vamps-head.gif	1	one GIF outside the inner folder

Extensions across the whole archive:

Extension	Count
.png	26,117
.gif	7,308
.mng	922
.bmp	15
.jpg	2
.tif	1
.htm	1
.pe4	1
.rar	1
.zip	1

That is 34,365 files with an image extension. Five of them are 1 to 8 bytes (a newline, or an 8-byte stub). Another 65 image-extension files are under 512 bytes. Of the image-extension files, the median size is 2,972 bytes (10th percentile 1,749, 90th percentile 6,200). The largest, 445,814 bytes, is named .png and is a 24-bit BMP.

heads/heads.rar is the same 34,366 names as the loose heads/heads/ folder, path for path. It does not add images. prewipeheads.zip is an older tree, timestamps 2008–2009, 3,655 files (15,893,816 bytes uncompressed): 3,563 .png, 52 .mng, 36 .gif, 2 .jpg, and 2 files with no extension. 1,215 of those basenames also appear in the loose tree.

Names are player or author stems. On the image-extension files, 2,485 are exactly head plus digits (head100.gif, head632.gif), 11,156 end in head, 19,713 contain head elsewhere in the stem, and 1,005 do not

contain that word. 1,945 stems exist as both a `.gif` and a `.png`. A few names use characters outside ASCII; those bytes are left as the archive stored them.

Dimensions are a sample, not a census. Eighteen files taken at even steps through the image list: 14 are 32×560. A second set picked to cover png, gif, mng, bmp, jpg, and tif is the same strip, with the exceptions below. The opened GIFs are a single image each, so the 560-pixel height is the picture itself.

Opened file	What the header says
`(T)-Flame-Head.png`, `head100.gif`, `head61.gif`, `bluerose-darkhead1.png`, `zeroghead3.gif`, `cloud-kainhead.bmp`, `zoehead3.jpg`, `Hydromethadoxkat.tif`, `catboy-darkmage-head.mng`, `teikaro-vamps-head.gif`	32×560. PNG and BMP samples are indexed colour (palette 7 to 256). The JPEG and the TIFF are the same width and height. GIF87a or GIF89a, one image.
`cloud-head9-edited.png`	32×560, indexed, 29 palette entries
`kaybehhead1.mng`	MNG, 36×560
`pink-wierdo-head.png`	truecolour PNG, 29×508
`katie-head29.png`	indexed PNG, 32×557
one other PNG in the even spread	indexed PNG, 32×559
`blue-monkey-head.png`	truecolour PNG, 41×618
`ellens-magic-head.png`	BMP, 265×560, 24-bit
`sniperrifleleft.gif`	GIF, 84×22, one image

The `.htm` (26,859 bytes) and `.pe4` (21,675 bytes) were not treated as images. The `.pe4` header is a binary record and embeds a local Windows path; that path is omitted.

Graal File Pack.7z

`Graphics/Graal File Pack.7z` is 124,044,350 bytes (7-zip, LZMA with BCJ, two solid blocks). Uncompressed it is 267,976,494 bytes: 49,619 files and 200 folders. Timestamps run from 1996 to 2013, with 17,604 files dated 2003 and 10,103 dated 2004.

Three top-level folders:

Folder	Files	Layout
`levels/`	48,631	the asset folders below
`sounds/`	880	flat: 876 `.wav`, 2 `.mid`, 1 `.au`, 1 `.txt`
`npcs/`	108	`.txt` only

`levels/` children, by file count:

Folder	Files	Main extensions
`levels/heads`	12,258	png 7,888, gif 3,826, mng 527, bmp 12
`levels/webgifs`	11,292	png 6,366, gif 4,588, mng 262, bmp 31, mid 18, txt 12
`levels/heads2`	7,542	png 5,451, gif 1,784, mng 307
`levels/ganis`	7,388	gani 7,353, plus a handful of png, gif, wav, mng
`levels/images`	3,076	98 files in the folder, 2,978 more in 180 subfolders
`levels/shields`	2,199	png 1,236, gif 816, mng 140
`levels/swords`	1,640	png 880, gif 732, mng 23
`levels/bodies`	1,238	png 983, gif 235, mng 16
`levels/hats`	835	png 796, gif 35

Folder	Files	Main extensions
levels/bodies2	784	png 636, gif 132, mng 16
levels/bomys	156	png 109, gani 37, gif 10
levels/midis	134	wav 71, mid 61
levels/npcs	37	txt 33, plus one .nw, one .exe, two images
levels/backpals	31	png 23, gif 5, pe4 2, txt 1
levels/baddies	10	png
levels/horses	8	gif 4, png 4
levels/letters	3	png 2, gif 1

Extension totals for the whole archive: png 26,601, gif 13,007, gani 7,391, mng 1,334, wav 950, txt 157, mid 81, bmp 49, pe4 17, jpg 10, nw 6, graal 3, mp3 2, bat 2, and one each of psd, au, cur, jbf, log, tif, tmp, exe, and a file with no extension.

Headers that were opened match those extensions. levels/ganis/1_mace_walking.gani starts with GANI0001 and a SPRITE line. A head GIF and a head BMP in this pack are 32×560, the same strip as heads.7z. A shield MNG is 191×68. A webgif PNG is 48×48 indexed. levels/midis/007variation1.mid is standard MIDI, format 1, 8 tracks, 192 ticks per quarter note. sounds/44magnum.wav is a RIFF WAVE file. sounds/kookabur.au is a Sun/NeXT .snd file, 26,160 bytes, 8 kHz, mono, mu-law (the same name and size the inventory note measured inside SFX.rar). The 23 PNGs under levels/backpals are the same count client-internals/client-assets.md gives for a client backpals/ folder. The 18 PNG names and byte sizes from backpals.rar (below) all sit in that folder as well.

levels/npcs/npcs.exe (51,200 bytes) was not run. The .txt files under npcs/ and levels/npcs/ were not read. The three .graal files and six .nw files were counted by extension only.

MIDI.rar

Sounds/MIDI.rar is a solid RAR4 archive, 236,891,607 bytes. The outer archive has 116 files under MIDI/:

Extension	Entries	Notes
.mid	105	94 distinct names. Eleven names are stored twice, once at MIDI/ and once under MIDI/MIDI_GraalForums_Player_Made/, with the same byte size both times
.zip	8	see below
.mp3	3	g2k2_medieval-banquet.mp3 (3,812,751 bytes), g2k2_two_kings-in-hadinland.mp3 (13,643,569), pwn00bzer.mp3 (1,318,313)

No .kar in the outer archive. Folders: 60 files directly in MIDI/, 41 in MIDI/Stef_Collection/, 15 in the player-made subfolder.

The eight zips unpack to 157 files: 48 .mid, 108 .mp3, 1 .ogg. Still no .kar. stef##.zip is the same 41 names as Stef_Collection. soundtrack.zip adds seven mid names that are not in the outer rar (gmaintheme.mid, gBar.mid, gdive.mid, gskit.mid, gdance.mid, gencounter.mid, intro.mid). Graal MP3s.zip is 203,293,878 bytes and holds 102 mp3s. The other zips are one or two audio files each (DEvolution.zip, mainmusic.zip, More_songs_I_made.zip, music_I_made.zip, dgn1-theme.zip). The ogg is varia_dgn1-theme.ogg, beside an mp3 of the same stem. None of the 108 inner mp3 names match the three loose mp3s.

Counting a duplicated name once, the unpacked set is 101 `.mid` names (94 outer + 7 soundtrack), 111 `.mp3` names, and 1 `.ogg`.

Opened MIDI headers and text events (a sample, not every file):

File	Header	Text that was read
`andor_theme2.mid`	format 1, 18 tracks, 48 ticks	a text event in Shift-JIS: fullwidth "ETERNAL WIND" and a short Japanese phrase. Track names include drums, guitar, melody
`armashop.mid`	format 1, 17 tracks, 384 ticks	no text or track-name event in the parse
`gene1.mid`	format 0, 1 track, 24 ticks	"Created by Square Wave(R), Swiftlet Algorithms, Port Blair, India"
`GrlMain0.mid`	format 1, 7 tracks, 384 ticks	copyright text "© 1998, 2001 by Peach." Track names are Guitar, Bass, Pads, Drums, Pan Flute
`medieval.mid`	format 1, 2 tracks, 960 ticks	track name "Track 1"
`nw-mood-fahren_glade.mid`	format 1, 7 tracks, 120 ticks	sequence title "untitled"; copyright text names Daniel Garzone, 2000. Same header shape as the small New World rar below
`Rainy Night.mid`	format 1, 8 tracks, 480 ticks	track names Lead Guitar, Acoustic Guitar, Strings, Piano, Rain
`stef3.mid`	format 1, 6 tracks, 192 ticks	track names Drums, Track7, Track8, Track9, Track10
`TORERO-2.MID`	format 1, 13 tracks, 384 ticks	standard MIDI header
`zzzero-town-1.mid`	format 1, 3 tracks, 384 ticks	marker text from a sequencer (`DEVICE=GENERAL.MDV`)
`gmaintheme.mid` (inside `soundtrack.zip`)	format 1, 15 tracks, 192 ticks	track name "-Fine Leather Midis-"; text names Michael Land
`intro.mid` (same zip)	format 1, 17 tracks, 120 ticks	sequence name "Rollercoaster of Death"; a text line names Curse of Monkey Island and a 1997 LucasArts copyright
`gdance.mid`, `gdive.mid`, `gencounter.mid`, `gskit.mid`	format 1, 11 tracks, 120 ticks	first track names MKBONES, MKDIVE, mkwdtick, MKEND, then instrument names
`gBar.mid`	format 1, 3 tracks, 192 ticks	track name "Jojo"; text credits Michael Land, Peter McConnell, and Clint Bajakian, with a 1991 LucasArts copyright line

Opened mp3s: `aiq_crypt.mp3` has an ID3 title "The Crypt" and artist "Ph8". `pwn00bzer.mp3` has ID3 year 2019, encoder "LAME in FL Studio 20", tempo 140, and no title frame. `[r]Evolution.mp3` has year 2007 and encoder "LAME in FL Studio 7", and no title frame. `armashop.mp3`, `jfhappy.mp3`, and `mainmusic.mp3` start with an MPEG frame and have no ID3 tag.

pets.rar, backpals.rar, New World MIDI

These three are the small archives the inventory note only had as RAR header names. Each was extracted.

`pets.rar` (2,382 bytes, RAR4, solid). One file: `pets/22 - BTsddue.png`, 2,194 bytes, dated 2019-01-30. It is an 8-bit RGBA PNG, 64×64.

`backpals.rar` (16,460 bytes, RAR4, solid). Eighteen PNGs under `backpals/`, every one indexed colour with a 256-entry palette. `afirebackpal.png` and `duskpal.png` are 1×1 (`duskpal.png` also has a 256-byte transparency chunk). The other sixteen are small strips, about 36–56 pixels wide and 26–49 tall, each with a 225-

byte transparency chunk: `dusk1`–`dusk8`, `sunrise1`–`sunrise4`, `sunset1`–`sunset4`. Timestamps are 2001-11-26 for `afirebackpal` and `dusk1`–`dusk3`, and 2014-04-23 for the rest.

`MIDI [Graal New World].rar` (16,982 bytes, RAR4, solid). Twenty-one `.mid` files and ten `.ini` files under `MIDI [NW]/`. Every opened MIDI is format 1 with 120 ticks per quarter note. Dates inside the archive are 2001-10-09.

Folder	MIDIs
`Battle/`	2 (`NW-Battle-Battledance`, `NW-Battle-Metalgans_Revenge`)
`Mood/`	6
`Over/`	3
`Town/`	5
`Other/`	2
archive root	3 (`Faded5.mid`, `newworld intro.mid`, `NW-Under-Ominous_Shadow.mid`)

Each of Battle, Mood, Over, Town, and Other also has `dc.filelocations.ini` and `dc.fileversions.ini`. The location file lists the mids in that folder with a value of `*`. The version file lists the same names with a value of 1. The root mids are not in those lists.

Sequence titles that are set: "Victory is Ours!" (`NW-Mood-Victory_Is_Ours.mid`, which also names Johnathan Williams next to Daniel Garzone), "Sunlight of Joy", "Valgoth", and "NewWorld Intro". The other opened files use the sequence title "untitled", and the filename is the name. A copyright text event on these files names Daniel Garzone, 2000. Further track names are instruments (Piano, Strings, Trumpets, Guitar, Percussion). Sizes run from 2,203 bytes (`NW-Mood-Martyrs_Blood.mid`) to 24,139 bytes (`NW-Battle-Metalgans_Revenge.mid`). `newworld intro.mid` is format 1 with 17 tracks.

What was checked

Full archive listings: `heads.7z` (including the inner RAR5 and the prewipe zip), `Graal File Pack.7z`, `MIDI.rar` (including all eight inner zips), `pets.rar`, `backpals.rar`, and `MIDI [Graal New World].rar`.

Headers opened: about two dozen head images from `heads.7z` (the table above), one gani, one wav, one au, one mid, one head gif, one head bmp, one shield mng, and one webgif png from the file pack, the single pet PNG, all 18 backpal PNGs, all 21 New World mids, and the MIDI files and mp3s named in the MIDI section. NPC text and `npcs.exe` were left alone.

`archive/game-assets-websites-2026-11-01.md`

Website archives left unread (2026-11-01)

The Game Assets inventory (`archive/game-assets-2026-11-01.md`) named eleven website archives and stopped at the filename. This note is a static read of those archives from the same Drive folder (`/[Grok/Graal/Game Assets`, Websites). Nothing from them is committed: no HTML, no SQL, no images, no executables. Host names that appear inside pages, shortcuts, or saved login forms are left out. Account rows, mail, session ids, and password material in the SQL dump were not copied.

Executables in the Dragon, construction, and NPC archives were not run.

Old community forums

An HTTrack mirror dated 10 March 2019 (about 52 MB, about 5,800 HTML pages). The copier cache (`hts-cache`, a log, a cookie file) sits beside the site. The cookie file was not opened. Saved pages carry session ids in their query strings; those ids are not repeated here.

The board is Simple Machines Forum with a green theme. The index, as saved that day, shows 1,889 posts in 257 topics by 135 members. The newest post named on the index is 8 November 2018. Most last-post dates on that page are in 2018.

Two categories:

Category	Boards
Graal Classic	Updates and Announcements; Classic Main Forum; Bugs and Suggestions; Events; Guilds
General Discussion	Hello and Goodbyes; General Graal Discussion; Non Graal Related

A news line on the index names a 2004 adventure server and a project called GrailWay. The links are omitted. An info-center block gives the counts above. The mirror also kept the theme, smileys, avatars, and two spreadsheet attachments (a card-rarity sheet and a collection sheet), which were not opened.

Dragon site

The outer archive (about 18 MB, labelled 2014–2017) holds two inner RARs with the same 263 names: one labelled 14 May 2014, one labelled 2 September 2017. They are the same FrontPage site, not a separate server tree.

Page dates inside are 23 April 2014. The front door says the site was made on 9 August 2002. A news page is dated 12 November 2002. The frame set is titled as a Dragon Tri-Jer site "for all your Graal needs".

Sections: news, tutorials (basic NPC scripting, house NPCs), a help page that glosses staff abbreviations (police, NPC team, and the like), downloads, NPC downloads, server guides, links, a comment form, staff list, and staff signup. The download folder holds installers and zips for remote control, the shop, gif2mng, a level generator, a level viewer, old and new setup programs, and a Game Boy demo, plus one-line blurbs. Those programs were not run. NPC downloads named on the page are small (jump rope, bat form, fake death, level generator). Server guides are a long list of worlds; almost every slot says the guide still needs writing. Doomsday is the one with a weapon and system list (capture the flag, hats, outfits, stats, and similar). A hangman popup is included. One text file is a short beginner trainer note and another is a list of client attribute lines; neither is copied. A comment in the guide page contains an email address; it is not copied. Staff named on the list are Agret, Daddypuff, Ryo-Ohki, and Albino Monkey.

Guild vault

177 KB, outer files restamped 21 August 2019. An inner RAR is the same site with the original times: 30–31 December 2004.

The front page is titled "Dustari Historical Vault". It is a black page with a banner and image buttons that load an iframe. The buttons are hierarchy, keep, court, kingdom, and future. Those pages are one-line placeholders ("The keep.", "Court.", "Kingdom.", "Future!"). The hierarchy page only asks the reader to scroll. A lineage page says its image is missing. There is no member list, no levels, and no further copy.

2023 construction site

About 5.7 MB, folder dated 20 March 2023. The page files inside are dated 17 September 2019. The bundled source zip is dated 28 December 2014, and its changelog dates 0.2.1–0.2.3 to March–August 2010.

The single HTML page is a Gonstruct site: introduction, screenshots, changelog, and download. The introduction says regular work had already stopped. The download offers a Windows setup named 0.2.3 (not run), a MacPorts note, and `graal-gonstruct-master.zip`. That zip is a C++/CMake level editor (GTK, a level-editor target, toolbar icons for links, NPCs, signs, and tilesets). The changelog's 0.2.3 lines are crash fixes for new NPCs and for saving transparent tiles. 0.2.2 adds editing of existing gmaps. The readme calls the program an unofficial level editor; the host it names is omitted.

Kingdoms library

About 4.8 MB. The archive name spans 1998–2006. The footer on the library pages is 2006 and credits Björn. One index file is dated 17 March 2007; most of the HTML was saved 20 January 2014. 946 PNGs sit beside 78 HTML pages, 3 PHP pages, two stylesheets, and a tooltip script. The images were not opened one by one.

The front title is "Server: Graal Kingdoms - Item LIB", with a note that the site was tested in Firefox. The menu is Home, Kingdoms, Maps, Tutorials, Gods, Commands, and a LIB menu: Armour, Food, Furniture, Magic, Misc, Weapons, Special. A furniture page splits into beds, carpets, chairs, and other. Item rows show a name, a weight, and "last edit by Björn" with an empty date. A kingdoms page describes Samurai as a feudal-Japan area with paper walls and pagoda roofs. Map pages are click-to-enlarge screenshot maps: Dustari, Forest, Pirates, Samurai, Zormite, Udung, Events, and a main map. Tooltips on those maps are short quest hints (bring a wizard a heart or a skin, a pirate shipyard, a geologist). A corner widget says how many players were online and offers login, password, and register. No account list was in the HTML that was opened.

NPC website

About 59 MB, files dated 16 December 2003, plus a later video pair and a screenshot restamp. A zip inside the RAR (about 42 MB, 217 entries) is the same tree again.

`files/` is 163 small zips named for weapons and gadgets (bows, bombs, banks, turrets, and similar). One opened pack (`bank.zip`) holds a level file and a gif, so these are content packs rather than another website. `graalfiles/` is a client download table: Gold, 1.1, 1.2.7, 1.2.8 beta 2, the 1.3 test, 1.3.1 through 1.3.9, 1.4, and a 2000 build, plus a level-and-gif pack and a gif pack. The page's own notes call 1.2.8 beta 2 a well-known build and say attack points arrive in 1.3. The client zips and a "graal movie" executable were not run. `help/` is five short scripting pages: flags, signs, warps, a status picture, and making a minimap. `dl.php` is a download script (it reads a line list and prints a "missing information" error when the id is empty); it was not executed. Two 2019 video files sit at the top of the archive and are not part of the 2003 tree.

Forum SQL

225 KB compressed, about 4.6 MB of SQL, archive dated 10 December 2006. The file is a phpMyAdmin dump generated 4 July 2006 (MySQL 4.0, PHP 4.3). It is an Invision Power Board schema: 88 tables, all prefixed `ibf_`. Inserts are present, including 218 member rows and matching extra and converge rows, mail, and sessions. Those rows were not copied. No password, email, or session value from the dump is in this note.

Table names:

- Admin: `ibf_admin_logs`, `ibf_admin_permission_keys`, `ibf_admin_permission_rows`, `ibf_admin_sessions`
- Board: `ibf_announcements`, `ibf_forums`, `ibf_forum_perms`, `ibf_forum_tracker`, `ibf_topics`, `ibf_topics_read`, `ibf_topic_markers`, `ibf_topic_mmod`, `ibf_topic_ratings`, `ibf_topic_views`, `ibf_posts`, `ibf_polls`, `ibf_voters`, `ibf_attachments`, `ibf_attachments_type`
- Members: `ibf_members`, `ibf_member_extra`, `ibf_members_converge`, `ibf_members_partial`, `ibf_validating`, `ibf_groups`, `ibf_titles`, `ibf_pfields_content`, `ibf_pfields_data`, `ibf_dnames_change`, `ibf_banfilters`, `ibf_warn_logs`, `ibf_moderators`, `ibf_moderator_logs`
- Sessions and mail: `ibf_sessions`, `ibf_reg_antispam`, `ibf_contacts`, `ibf_email_logs`, `ibf_mail_error_logs`, `ibf_mail_queue`, `ibf_bulk_mail`, `ibf_message_text`, `ibf_message_topics`
- Look and settings: `ibf_conf_settings`, `ibf_conf_settings_titles`, `ibf_languages`, `ibf_emoticons`, `ibf_badwords`, `ibf_custom_bbcode`, `ibf_skin_sets`, `ibf_skin_macro`, `ibf_skin_templates`, `ibf_skin_templates_cache`, `ibf_cache_store`, `ibf_components`, `ibf_login_methods`, `ibf_faq`
- Calendar: `ibf_cal_calendars`, `ibf_cal_events`, `ibf_calendar_events`
- Arcade: `ibf_games_cats`, `ibf_games_list`, `ibf_games_scores`, `ibf_games_settings`, `ibf_games_champs`, `ibf_tournaments`, `ibf_tournament_players`
- Subscriptions: `ibf_subscriptions`, `ibf_subscription_currency`, `ibf_subscription_extra`, `ibf_subscription_logs`, `ibf_subscription_methods`, `ibf_subscription_trans`
- Portal and tasks: `ibf_unrealportal`, `ibf_up_custblocks`, `ibf_up_custcontent`, `ibf_up_settings`, `ibf_rss_export`, `ibf_rss_import`, `ibf_rss_imported`, `ibf_search_results`, `ibf_spider_logs`, `ibf_task_logs`, `ibf_task_manager`, `ibf_tracker`, `ibf_upgrade_history`, `ibf_template_diff_changes`, `ibf_template_diff_session`, `ibf_templates_diff_import`

The `ibf_forums` rows (board names only) are three parents: Zodiac, Non Zodiac, and Staff Only. Under Zodiac: News, General Discussion, Support, Staff Applications, Suggestions, a register-to-view notice, File Uploads, and Hello/Goodbye. Under Non Zodiac: General Ramblings, Media, Spar Arena, and Signatures/Avatars. Under Staff Only: Assignments, Staff Lounge, Development, and Trash. A shortcut beside the dump names the forum; the address is omitted.

2019 developer site

About 3.1 MB, archive dated 10 March 2019. Most of the named pages are two-byte stubs (a download that stopped at `<h` or `<!`): articles whose filenames are Concatenation, tabbed panes, database communication, echo, for, function, if, while, GScript, a GUI-controls list, GUI profiles, classes, SQLite, and a gs2 emulator page, plus several forum-display stubs.

Three files actually have a page. A Wayback shell titled "Fowlplay4" is a GS2 course: hello world, variables, logic, math, functions, debugging, clientside code, drawing, timeouts, default systems, keyboard and mouse, GUI objects, client/server, database NPCs, classes, file I/O, SQLite, and network I/O, with small challenges (a calculator, staff boots, a HUD, a bank). The capture banner spans 2013 to 2020. A second saved thread is titled "Gs2 for the Noobs #1 - The Beginner's Guide!" and is a forum page (register, calendar, member list) inside another Wayback shell. A third file is a saved video-channel page, not a scripting article. A 3.5 MB PNG is a shot of a Farm Kings board on the same developer site; the image is not committed. `fdl-1.2.txt` is two spaces.

Flash intro

30 KB. Two files dated 20 January 2018: `index.html` (titled "Graal introduction") and `intro1.swf` (30,265 bytes). The page is only a centred Flash 4 object, 550 by 400, playing that SWF. The embed's host is the old community site and is not written here. The SWF is compressed; readable strings were not recovered from it.

Chaos Continuum

20 KB, solid RAR. Twelve HTML pages and five GIFs. Page times run from February 1999 to 23 November 1999, which matches the archive name.

Every real page is titled "CHAOS CONTINUUM" except a one-line joke page. The shared menu is Downloads (levels, gifs/music, horses), Pics (maps, towns, houses), and Other (credits, submit, vote, buy a house). The front page says the site holds the files for playing there. Levels offer beta packs from 0.2 through 0.9 and tell the reader to start at a named level. Horses and town pictures are empty placeholders. Maps offers a planned map, a real map, and a final map. Buying a house is priced at 1,000 rupees a room. Credits name a main level creator. Gifs are a gate frame, a logo, and a top banner.

ODiUM

24 KB, files restamped 5 January 2023. The archive name is 24 March 2002, and that is the date on the news page.

Three HTML files, three GIFs, and a shortcut. `index.html.html` (the extension is doubled) is a refresh page titled "Odium - The Search Is On", calling it a new player world; the target address is omitted. `index1.html.html` is a menu titled "ODiUM v5.0!": News, Staff, Server Info, Od-Pets, Forums, Screen Shots, Staff Application, Link to Us, and a staff ToolBox. `news.html` is "ODiUM v4.0!!" and is a Coranto news log. The visible post is 24 March 2002, from the person running the server, saying the layout would change and that work was still going on. A shortcut in the archive points at a February 2002 web-archive capture; the address, which is a dotted host, is omitted.

`archive/game-assets-worlds-2026-11-01.md`

Worlds and level dumps (2026-11-01)

Follows `archive/game-assets-2026-11-01.md`. That note opened one level dump (alkaren) and one world archive (Andor, 21 July 2002). This note opens the other level-dump archives, the three Zelda Online rars, `Zone_GMAP.rar`, and a sample of the 87 archived server folders. Nothing from the folder is committed: no archives, levels, images, or scripts.

Static read only. No binary was run. A level magic is the first 8 bytes. `GR-V1` and `Z3-V1` files were accepted by `formats/grv1-decoder/grv1.py` (`load`, the existing header check). Every one of those files reported below loaded. `GLEVNW01` is the text magic and is not passed to that decoder. AppleDouble files (`._` names, a Mac resource fork) are left out of the counts.

Baseline, not re-counted

From the earlier note: the alkaren dump has 29 `.nw` files whose magic is `GLEVNW01`, 5 `.nw` files whose magic is `GR-V1.03`, and 16 `.graal` files whose magic is `GR-V1.03`. Andor 2002 is one flat directory of 409 `.graal` and 93 `.nw`, plus one `GRMAP001` gmap. Those two archives are the baseline only.

Other level dumps

Both dump folders were opened: 19 rars under "Graal - Level Dumps" (alkaren left as the baseline) and all 17 under "Graal New World - Level Dumps". Nested rars and zips inside those archives were opened too, and so was the zip inside the police dump. Totals for that set:

Magic	Where	Count
`GLEVNW01`	`.nw`	330
`GR-V1.03`	`.nw`	5
`GLEVNW01`	`.graal`	2
`GR-V1.03`	`.graal`	305
`GR-V1.02`	`.graal`	1
`GR-V1.01`	`.lost`	1
`GR-V1.02`	`.zelda`	1
`GR-V1.03`	`.zelda`	1
`GR-V1.03`	no extension	13
`GR-V1.03`	`.shop`	1
`GR-V1.03`	`.nw-notused`	1

So among files whose name ends in `.nw`, 330 are `GLEVNW01` and 5 are `GR-V1.03`. The five are all in `Snapshots of chicks.rar`: `snapshot_worldg-18.nw`, `snapshot_worldv-20.nw`, `snapshot_worldw-13_hatshop.nw`, `snapshot_stefquest-1.nw`, and `snapshot_worldi-17.nw`. The same dump also has 95 `GLEVNW01` `.nw` files and 16 `GR-V1.03` `.graal` files. That is the same mismatch the alkaren dump showed (the extension is not the magic), and it is the only dump in this set where a `.nw` name carries `GR-V1.03`.

The other direction shows up twice, both inside nested rars in the Agret dump: `snapshot_mdgquest11.graal` and `snapshot_onlinestartlocal2.graal` are `GLEVNW01` text. `Jesters house 2.rar` has `bab_e-11.nw-notused`, which `grv1.py` reads as `GR-V1.03`; the suffix is not `.nw`, so it is not in the 330 / 5 split.

Older magics are rare and sit in `graalnew.rar`: `level6.graal` and `vampgrave2.zelda` are `GR-V1.02`, and `level7.lost` is `GR-V1.01`. `levelscrappy.rar` has one `.zelda` name whose magic is `GR-V1.03`. No `Z3-V1` magic turned up in these two dump folders.

Per archive, level magics only (images and scripts omitted). Agret's outer rar is the row below; its nine nested rars are the next row. Graal Kingdoms' outer rar is two zips; their levels are the row after that. The police row includes three `GLEVNW01` files inside `Mt. Antora Station.zip`.

Archive	Level magics
`9-06-2000.rar`	8 `.graal` `GR-V1.03`
`antglobe.rar`	1 `.graal` `GR-V1.03`
`aod-town-brett.rar`	16 `.graal` `GR-V1.03`, 11 extensionless `GR-V1.03`, 1 `.shop` `GR-V1.03`
`Brett's--lvls.rar`	97 `.graal` `GR-V1.03`, 2 extensionless `GR-V1.03`
`elftown.rar`	27 `.nw` `GLEVNW01`, 23 `.graal` `GR-V1.03`
`fishhouse-2.rar`	6 `.graal` `GR-V1.03`
ghost pirate rar	12 `.graal` `GR-V1.03`
`graalnew.rar`	1 `.graal` `GR-V1.02`, 1 `.zelda` `GR-V1.02`, 1 `.lost` `GR-V1.01`
`levelscrappy.rar`	3 `.graal` `GR-V1.03`, 1 `.zelda` `GR-V1.03`
`partyhall.rar`	1 `.graal` `GR-V1.03`
`personalhouse9.rar`	1 `.graal` `GR-V1.03`
pikachu mix rar	8 `.nw` `GLEVNW01`, 19 `.graal` `GR-V1.03`
`Set Stuff.rar`	1 `.graal` `GR-V1.03`

Archive	Level magics

Intro Levels.rar	23 .nw GLEVNW01
Jesters house 2.rar	23 .nw GLEVNW01, 1 .nw-notused GR-V1.03
Kakariko.rar	4 .nw GLEVNW01
Police.rar	24 .nw GLEVNW01
School.rar	1 .nw GLEVNW01
Snapshots of chicks.rar	95 .nw GLEVNW01, 5 .nw GR-V1.03, 16 .graal GR-V1.03
twintowers.rar	1 .nw GLEVNW01
Zippys soda factory.rar	6 .nw GLEVNW01
Zol's pub rar	14 .nw GLEVNW01

Kakariko.rar also has village.gmap (see below). Several dumps mix in png, gif, and gani files. Those were not measured.

Zelda Online's three rars

Zelda Online.rar (50 KB) and zolevels.rar (49 KB) are the same 36 .zelda files. Byte for byte, each pair matches. Every file is Z3-V1.03 and grv1.py reads it. Names: cave1, cave2, level1 through level29, linkshouse, and village1 through village4. Archive dates on the files are April–May 1998. Zelda Online.rar nests them one directory deeper; the timestamps differ by an hour.

Zelda.rar (948 KB) is a later mix, not a third copy. It has 34 .zelda names. level6.zelda, level10.zelda, and level27.zelda are still the Z3-V1.03 bytes from the small rars. The other 31 .zelda names are GR-V1.03 and are not the same bytes. linkshouse.zelda and village4.zelda are absent. Beside those levels: two identical GLEVNW01 files (metro_starthouse.nw and onlinestartlocal.nw, same hash), one GR-V1.03 .graal (onlinestartlocal.graal), gif and jpeg pictures, two short letters (they name an official host; the host is left out), and a nested zip of a 1.39-era server tree (22 entries, including two executables, which were not run).

Zone gmaps

Zone_GMAP.rar (2 KB) is 19 text gmaps, dated 2008 through 2014 in the archive listing. Every file starts GRMAP001, then WIDTH and HEIGHT, then a LEVELNAMES block of one row per line and LEVELNAMESEND. None has

GENERATED. Sixteen also have NOAUTOMAPPING (zone_alien.gmap, zone_monsters9.gmap, and zone_monsters9_inst224.gmap do not).

File	Grid
zone_ad.gmap	9 × 5
zone_alien.gmap	3 × 3
zone_arctic.gmap	8 × 6
zone_arctic_final.gmap	2 × 2
zone_conquest.gmap	5 × 5
zone_conquest_final.gmap	2 × 2
zone_green.gmap	8 × 6
zone_green_final.gmap	2 × 2
zone_jumprace.gmap	1 × 6
zone_mission1.gmap	1 × 10
zone_monsters1.gmap and three inst copies	6 × 5
zone_monsters2.gmap, zone_monsters3.gmap	6 × 5
zone_monsters9.gmap and zone_monsters9_inst224.gmap	2 × 2
zone_platform.gmap	4 × 2

A row is quoted names separated by commas. zone_ad.gmap row 1 is "zone_ad-a1.nw","zone_ad-b1.nw",… through i. zone_platform.gmap is the same grid with the quotes left off (zone_platform-a1.nw,zone_platform-b1.nw,zone_platform-c1.nw,zone_platform-d1.nw). Kakariko.rar's village.gmap is the same shape at 2 × 2, plus a MAPIMG line before LEVELNAMES.

Archived server folders

Archived Servers # is 87 folders, one listing, no further page. Full downloads of all 87 do not fit (several single rars are tens or hundreds of megabytes). All 87 names are below. Thirteen were opened, spread from 1999 file dates through a 2020 folder name. The other 74 were listed only.

Opened:

Folder	What was opened	Levels, gmap, gani, scripts
Chaos Continuum	cc12-04 rar, 376 KB. File dates in the listing are 1999	219 .graal GR-V1.03, plus one .old file with the same magic. Image files and an html website folder. maps/ is directories of those levels. No .nw, no .gmap, no gani, no npc tree
Zelda Link to The Past	rar dated 2003-03-24, 178 KB	65 .nw GLEVNW01, images, one text file. No gmap, gani, or npc tree
Aleria	rar dated 2004-07-02, 262 KB	571 .nw GLEVNW01. levels/al.gmap is GRMAP001, WIDTH 23, HEIGHT 24, LEVELNAMES of quoted .nw names. Text scripts: NPCs 1, Weapons 15, Classes 2. No gani
Eternal	rar dated 2004-12-17, 321 KB	824 .nw GLEVNW01. overworld/eternal.gmap is LEVELNAMES, 27 × 30. Text under NPCs, classes, and guilds. No gani
Niromia	the 2006-12-11 rar, 436 KB. A 2007 rar in the same folder was listed only	411 .nw GLEVNW01 (one of them sits in Classes). No gmap and no gani. Text under NPCS (89), Weapons (32), Classes (8)

Folder	What was opened	Levels, gmap, gani, scripts
Horizon	rar dated 2006-11-24, 335 KB	390 `.nw` `GLEVNW01`. One further `.nw` does not start with a level magic. No gmap. 86 `.gani`: 46 start at `SPRITE`, 34 at `GANI0001`, 1 at `GANI0002`. Text: `npcs` 772, `weapons` 88, `guilds` 53
Zerati	rar dated 2006-10-26, 1.1 MB	889 `.nw` `GLEVNW01`, 5 `.gani`, no gmap. Text under `npcs` (1979), `weapons`, `guilds`, and `scripts`
Graal Legacy	rar dated 2006-10-26, 2.3 MB	234 `.nw` `GLEVNW01`, 7 `.gani`, no gmap. Almost the whole archive is `npcs/*.txt` (4583)
Aevum	outer rar dated 2009-08-03 is two inner rars; both were unpacked	The 2009-08-03 inner rar: 35 `.nw` `GLEVNW01`, 1 `.graal` `GR-V1.03`, and `maps/aev.gmap` (`LEVELNAMES`, 4 × 4, quoted `.nw` names). The converted inner rar: 56 `.nw` `GLEVNW01`, 1 `.graal` `GR-V1.03`, images, no second gmap
Flower World	rar dated 2012-10-13, 284 KB	32 `.nw` `GLEVNW01`, 1 `.graal` `GR-V1.03`, 12 `.gani`. `levels/fern_main.gmap` is `LEVELNAMES`, 5 × 5. Text under `npcs`, `weapons`, `scripts`
GrimeCraft	rar dated 2012-02-17, 1.0 MB	101 `.nw` `GLEVNW01`, 7 `.gani`. `Levels/grimecraft.gmap` is `LEVELNAMES`, 10 × 10. Text under `NPC's`, `Weapons`, `Classes`
Frolic	`Frolic.rar`, 5 KB, no date in the name	4 `.nw` `GLEVNW01` and nothing else
Graal Development Studio	starter pack in the folder whose name includes 2020-08-10, 41 KB	16 `.nw` `GLEVNW01`. `levels/overworld/playerworld.gmap` is `LEVELNAMES`, 3 × 3. A few `.txt` scripts and one weapons file

A typical opened folder is one dated rar. Inside it: level files (`.nw` `GLEVNW01`, and `.graal` `GR-V1.03` when the archive is older or mixed), often images, and text scripts in `npcs` / `weapons` / `classes` when the world has them. A gmap, when present, is one `GRMAP001` file with `WIDTH`, `HEIGHT`, and a `LEVELNAMES` block. Ganis show up in the larger 2006 packs and in the 2012 packs, not in Chaos, Aleria, or Eternal.

None of the thirteen is script-only in the way the Era pack from the earlier note is. Frolic is levels alone. The Development Studio starter pack has scripts and also 16 levels plus a gmap. Graal Legacy is mostly npc text and still has 234 levels.

Listed only (74), under the folder names they have on Drive: `## Offline Playerworlds Games ##`, Alvadore, Alzar, Andora Planet, `Anystria - PW65 [German]`, Archaic, Arynala, Atrian City, Azura, BlackPoint, Circuits, Cora, Corinthia, Coronia, Cythus Med, Dargaro, Dark Ages, Dark Diamond, Dark Horizon, Dark Nations, Dev_LifeInGraal, Dragandia, Dragon Tri-jer, `Dual Ortus Dominion [DOD]`, Elemental Kingdoms, Endora, `Extreme Power Wrestling [EPW_Graal]`, `Fallen Lands [FL Development]`, FastLane, Firebrand Kingdom, Galactic Nations, Galrovik, Graal Realms, Griffin, Hyroko, Infection, Jedi, Kuburiki, Life Bound, Lost Empire, `Lumina [2011-16-07] [GServer-2.3.1]`, `Magonia [Mag]`, Malhangaia, Mantara, Mario Theme Game PW, Midwinter Nights, Millenium, Mystic Nations, Nagorias, Outworld, Paradox, Phoenix, Playerworld WanDaMan, Rastafaria, Renegade, Revenge Online, Roak, Rudora, Sands of Glory, Seilius, Server Interface Test, `Shaded Angel Isles [S.A.I] AKA [Graal East]`, Shangri-La, Shogun Online, Silver Dreams, Sparitoria, `Spawn [Genesis]`, Stonehenge, Sumbria, Trabiac, Twisted, Unix Graal, Utheril, Vesporia. Dark Ages, Lumina, and Shangri-La are single rars of about 17 MB, 61 MB, and 30 MB. Server Interface Test is two rars (about 8 MB and 6 MB); the larger fetch came back as an HTML page, so it was not opened. Niromia's 2007 rar was listed and not opened.

Gmap text shapes

Two shapes were read from real files. Cells were not rebuilt.

Dungeon, `GENERATED` only. In the 2002 client zip already listed in the earlier note (`levels/maps/`, nine `GRMAP001` files), two files are only the signature, the grid, and one generated name:

```
GRMAP001
WIDTH 16
HEIGHT 16
GENERATED caverns_p-16.nw
```

```
GRMAP001
WIDTH 2
HEIGHT 2
GENERATED mines_b-2.nw
```

There is no `LEVELNAMES` block and no generator key after `GENERATED`.

Terrain generator files in that same zip are not bare name rows. Seven maps (`main` 40 × 40, `start` 16 × 16, and `forest`, `samurai`, `pirates`, `dustari`, `zormite` at 32 × 32) start `GRMAP001`, `WIDTH`, `HEIGHT`, then `GENERATED` plus one `.nw` name (the corner name, such as `GENERATED main_bn-40.nw`), then `GENSEED`, `GENBASE`, `GENEVENBORDERS`, `GENHEIGHT`, `GENCHAOS`, `LEVHEIGHT`, `LEVCHAOS`, and a minimap image line. `MAPIMG` is present and empty on `main`. A `HEIGHTMAP` block follows: rows of comma-separated integers, closed by `HEIGHTMAPEND`. Some of those files also contain `HEIGHTS` blocks (`HEIGHTS`, a level name, `8 8`, later `HEIGHTSEND`). A Loriel leak rar in the Graal2002 folder has `forest.gmap` in the same shape (32 × 32, `GENERATED forest_bf-32.nw`, two `HEIGHTS` blocks) plus 690 `GLEVNW01 .nw` files and one empty `.nw`.

No opened gmap uses `GENERATED 1` as a flag followed by one bare level name per row. The gmaps in Zone, Kakariko, Aleria, Eternal, Aevum, Flower World, GrimeCraft, and the Development Studio pack are the `LEVELNAMES` shape above: quoted (or, once, unquoted) names inside the block, one grid row per line.
